<b>Brand/product</b>	FT Thermal Break Frames
<b>Date</b>	Mar 11, 2019
<b>Subject</b>	FT Thermal Break adds Glass Lights
<b>Contact</b>	Ken Richied

Dear Valued Steelcraft Partners,

We are proud to announce the addition of glass lights to our FT Thermal Break offering. This addition to our already robust thermal break offering builds the best combination of strength, thermal resistance, and options in the market, with details such as internal channels that not only strengthen the mullion, but double as built-in hardware reinforcement. Steelcraft FT frames with lights were thermal tested at Intertek to ASTM 1363 per SDI standards. The tested units used full hardware and door assemblies to mimic real world conditions in order to provide customers with the most accurate results possible.

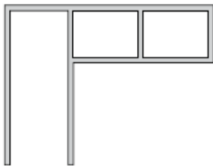

FT Glass light components are provided as factory assembled open or closed section mullions with our thermal separator gasketing, available KD or welded. Typical options match those found in our current FT-Series Frames. See attached price book addendum notes for more information.
